

Adding Infobase Learning Cloud (formerly Hoonuit /Atomic Learning) content in Blackboard using the Mashup Tool

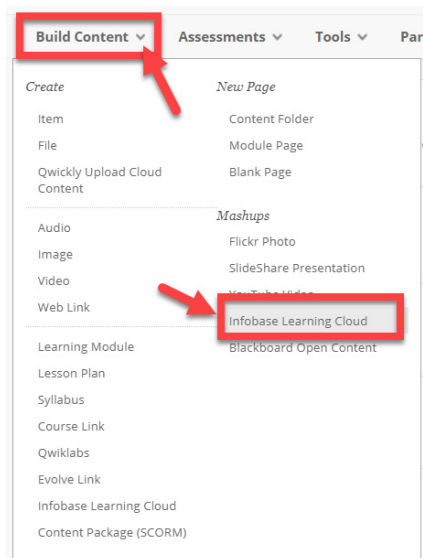

Infobase Learning Cloud (LC) provides online training and tutorial resources which are available for free to all QCC students, faculty, and staff. This job aid is for instructors seeking to add content to their Blackboard course shell, both graded and ungraded. **Please note that the content provider is still updating their branding, so you may see references to both Infobase and Hoonuit during this timeframe.** To view a short video about the tool, [click here \(01:51\)](#).

1. Adding Infobase LC Content to Blackboard

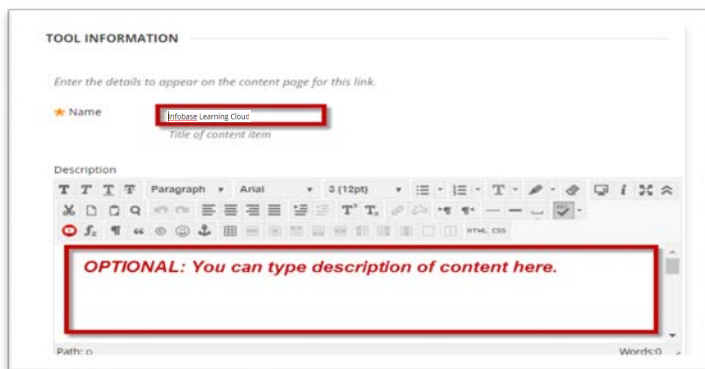

- Log into your Blackboard course and navigate to the content area where you would like to add Infobase content.
- Ensure that the Edit mode is ON (upper right corner) in your Blackboard course.

- In the content area, click the arrow next to **Build Content** to show the menu and click the **Infobase Learning Cloud** item (within the Mashup area).

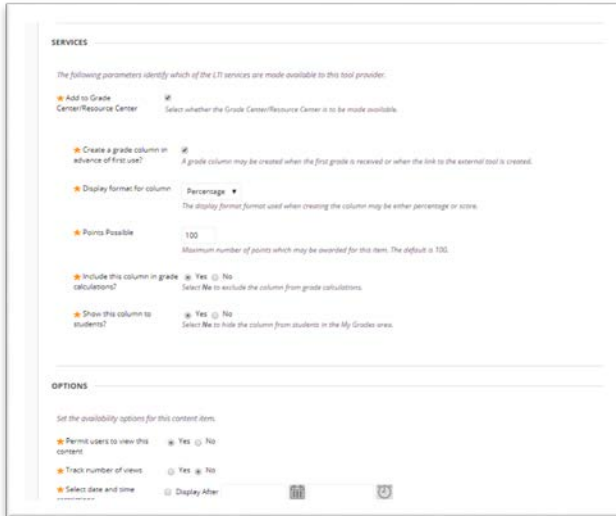

- From here you can add a customized Name for your content and a description of the content (note that the default Name for added content is Infobase Learning Cloud).

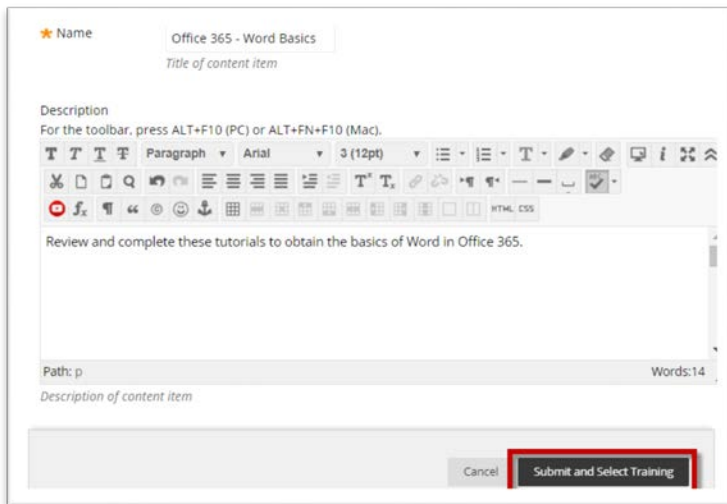

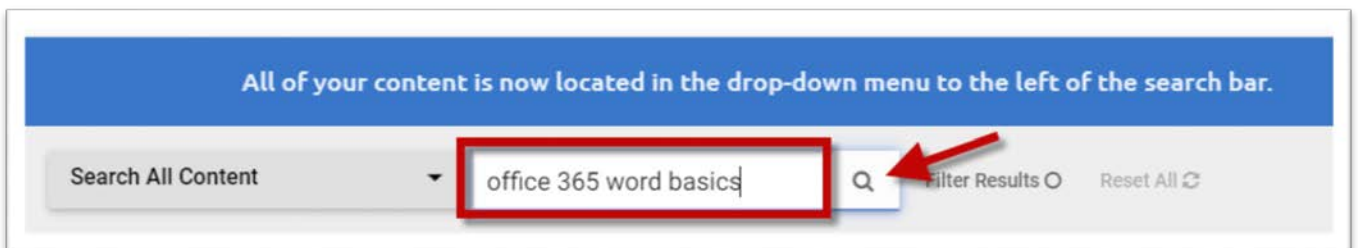

- Scroll down this page to view choices under the **Services** and **Options** areas, such as inclusion in your gradebook, adding a grade column, points, and additional release and date items. Modify according to your needs.

- When you have completed customizing this section, click the **Submit and Select Training** button in the lower right corner.

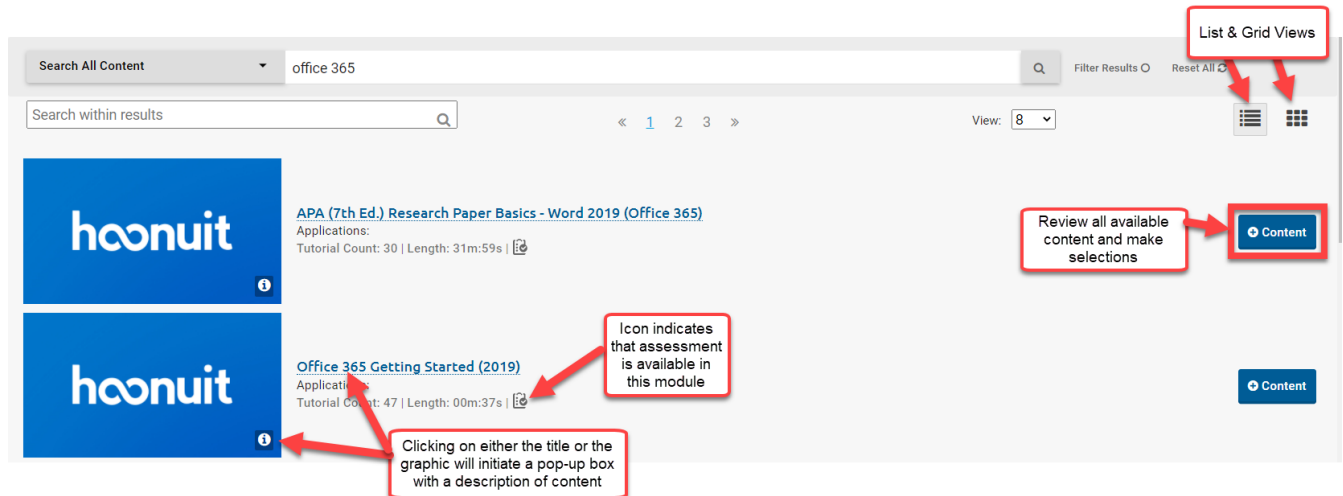

- This will open a window where you can search for content. Type your phrase or terms and click the search icon.

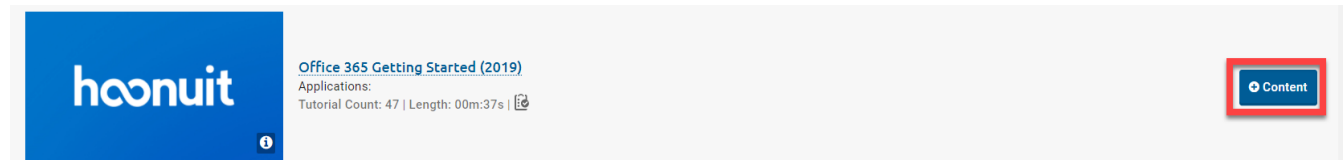

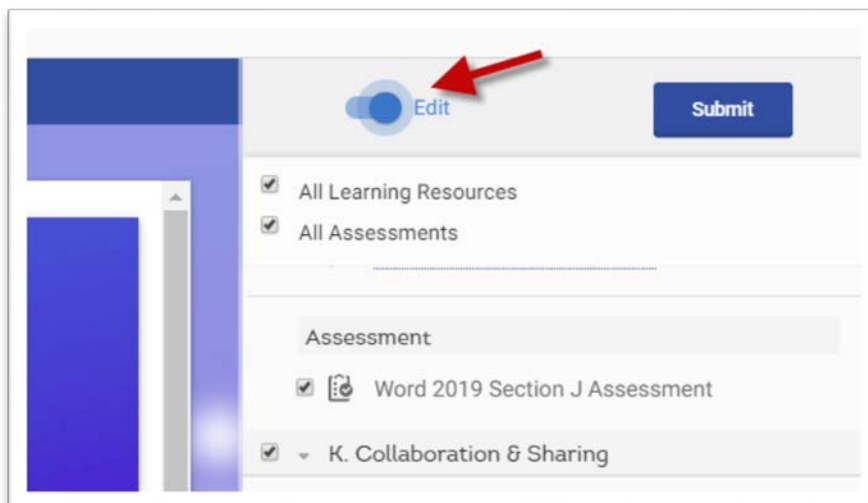

- You will then be provided with a list of content related to your search. There are some options and information here to assist you with your selection.

- Once you find an appropriate module, click the **Content** button to select.

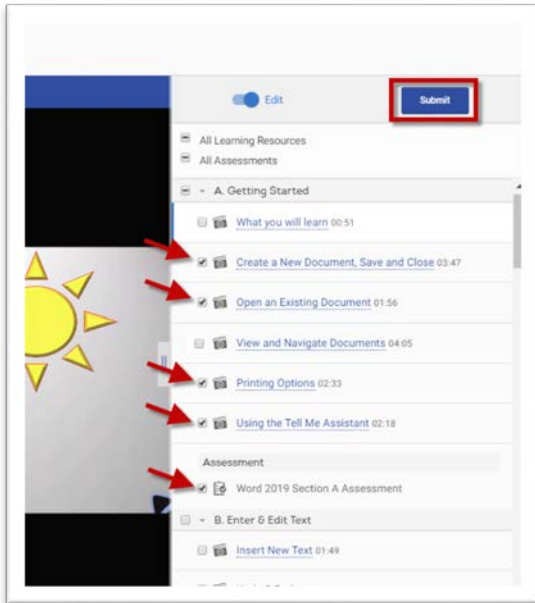

- When the window opens you will see the full list of topics and assessments (if available) for this training module. Edit mode is usually enabled when launched.

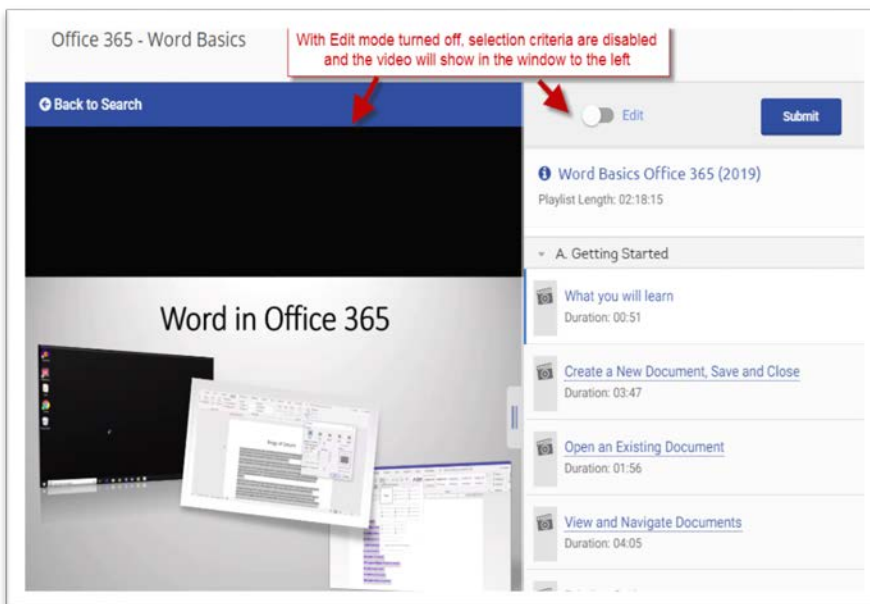

- With Edit mode on, you can see that all resources (and assessments if available) are currently selected. You can adjust to make custom selections by clicking the items you would like to add/remove. In the example below, I have added five items, including an Assessment. Click the **Submit** button when done.

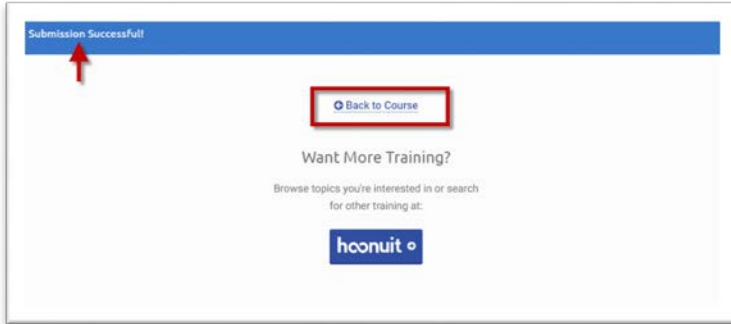

TIP!

By turning Edit mode off, you can now view the content prior to adding it to your Blackboard course.

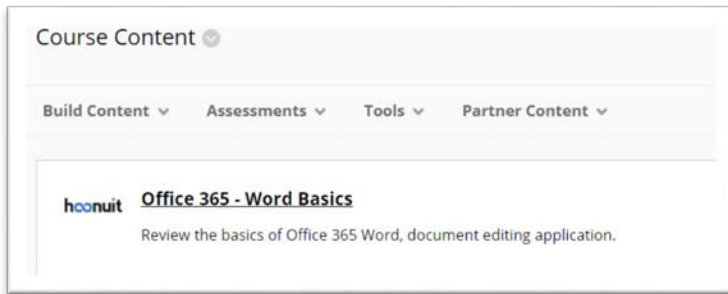

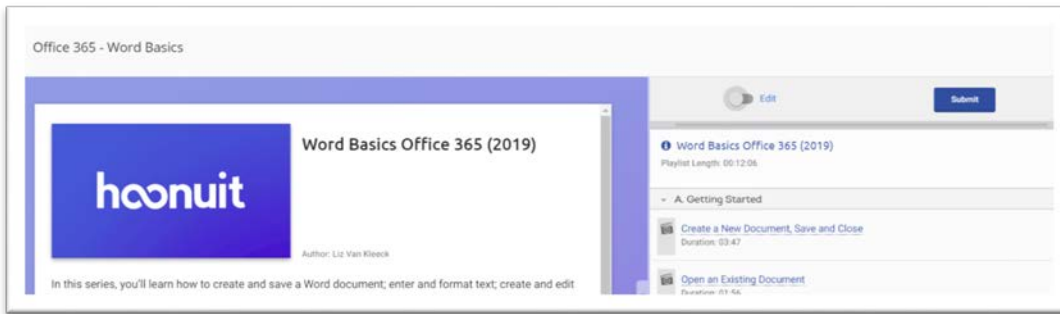

- You will receive confirmation of the submission, click on **Back to Course**.

- You should now see the content added to your Blackboard course with the Hoonuit logo. Click the title to launch and review for accuracy.

- Verify the content and turn the Edit mode ON if you need to make additional changes.
- Check your gradebook if you chose that option to verify your settings, points, etc.

You are done!

To access Infobase LC / Hoonuit in Blackboard, click on Bb support and then Infobase Learning Cloud:
